ReCap

HACKATHON · SOLVING REAL-LIFE PROBLEMS

ReCap

Turn every class, meeting & deadline into a weekly study plan.

AI meeting summaries · auto deadline capture · Gmail alerts · smart calendar

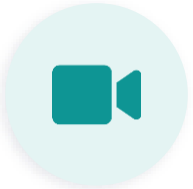

Presented by: Your Team | Track: Education × AI Agents

Students are drowning in information

Missed deadlines

Key due dates mentioned in class get lost in notes no one re-reads.

Unwatched recordings

Recorded lectures & meetings pile up — rewatching is too slow to be useful.

Surprise changes

Class cancellations & reschedules reach students too late, if at all.

No real plan

Even when they know the tasks, students lack a structured weekly study plan.

02 · THE SOLUTION

One co-pilot for your academic life

ReCap listens to your meetings, captures what matters, and plans your week — so nothing falls through the cracks.

Capture

Upload recorded meetings. AI transcribes and distills the key notes automatically.

Organize

Deadlines, exams and class times are pulled out and dropped onto your calendar.

Remind

Gmail alerts & reminders keep you ahead of cancellations, reschedules and exams.

From recording to ready-to-study in minutes

Upload

Drop a recorded meeting or lecture.

AI Summarize

Key notes extracted & broken down.

Extract Dates

Deadlines & exams auto-captured.

Weekly Plan

A study plan built around tasks.

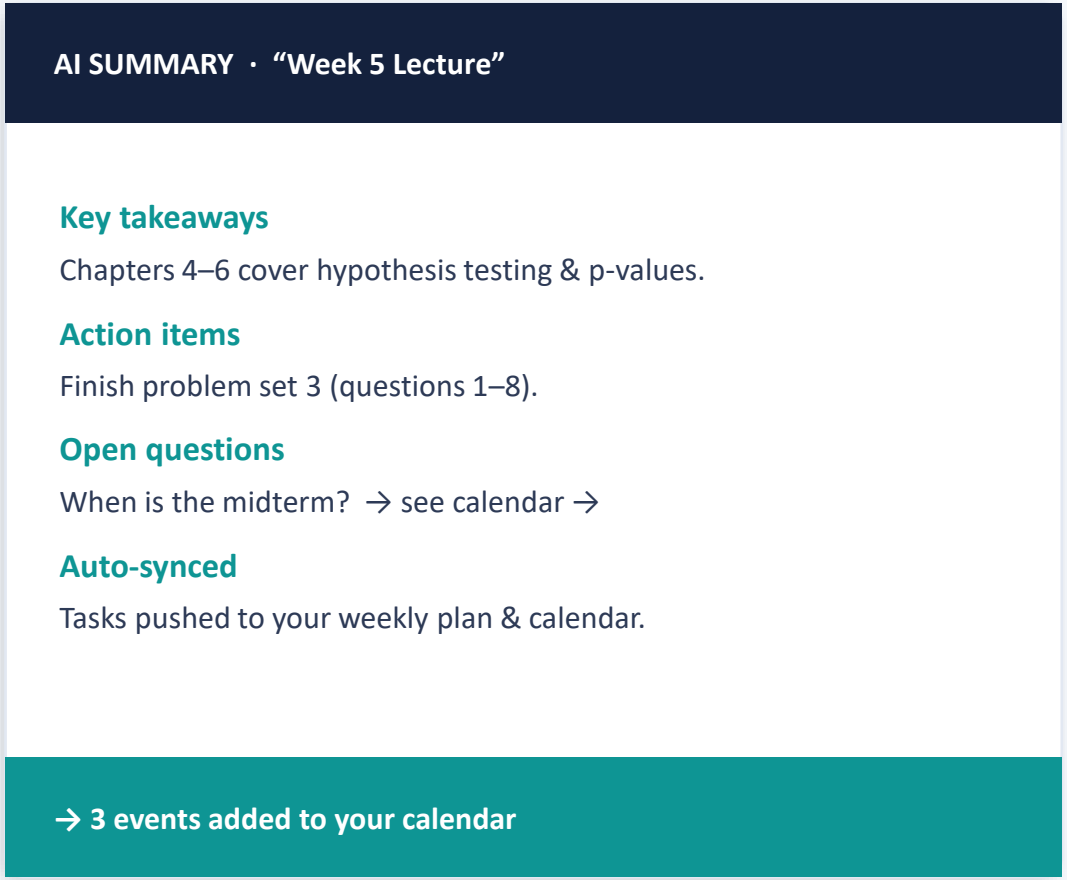

Calendar + Alerts

Synced & reminded via Gmail.

Meeting Intelligence

Upload a recording and ReCap returns a clean, structured breakdown — not a 60-minute rewatch.

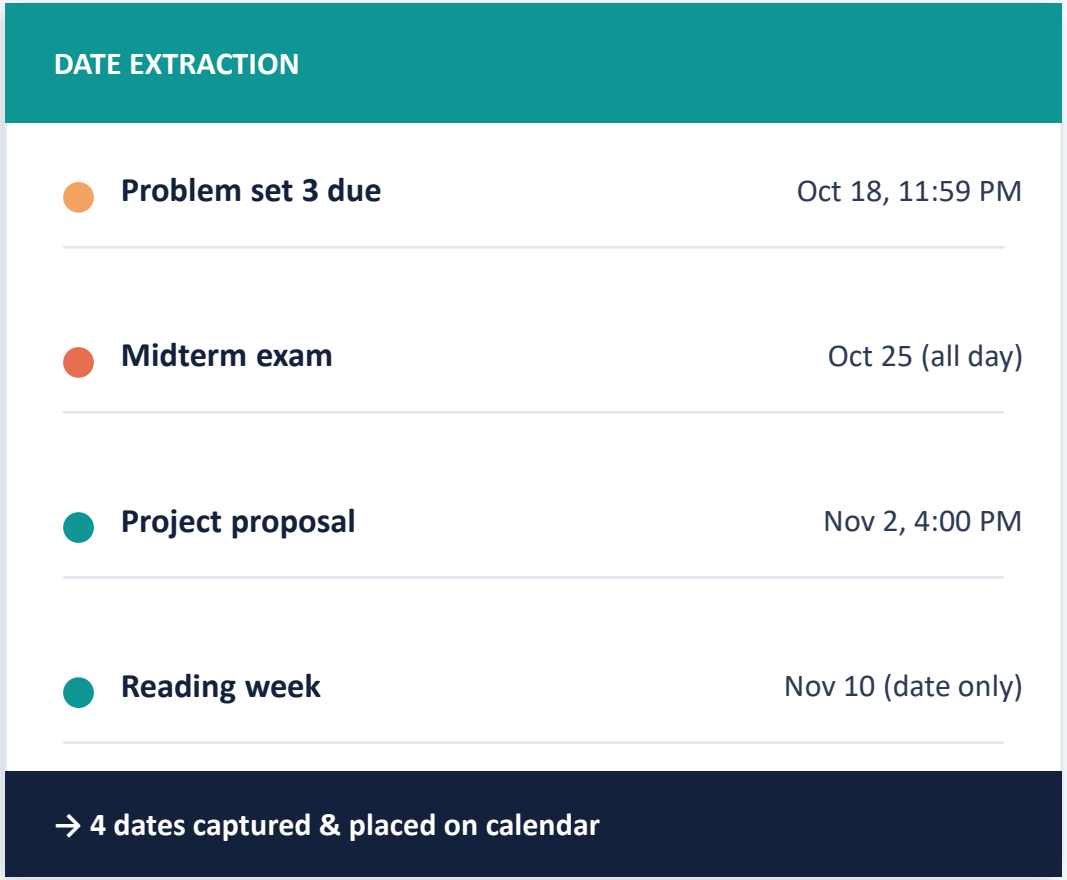

- Auto-transcribe recorded meetings & lectures
- Summarize key notes into clear takeaways
- Break content into topics, action items & open questions
- Ask follow-up questions on the summary

Dates & deadlines, captured for you

ReCap reads the summary and lifts out every date that matters — then places it on your calendar with the right precision.

- Detects deadlines, exams & submission dates
- Records date + time when discussed
- Records date-only when time is not mentioned
- Flags conflicts & clusters of due work

06 · FEATURE

A study plan that actually fits your week

ReCap turns your captured tasks into a realistic, balanced weekly plan — spreading work so you finish before the deadline, not the night before.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
Problem set 3	**Lecture review**	**Proposal draft**	**Practice exam**	**Catch-up**	**Rest**	**Weekly reset**
≈ 45 min	≈ 30 min	≈ 60 min	≈ 90 min	≈ 30 min	off	≈ 20 min

Plan re-balances automatically when a new deadline or reschedule appears.

07 · FEATURE

Gmail alerts that keep you ahead

Cancellations

Class cancelled? ReCap pushes a Gmail alert the moment it learns — no more showing up to an empty room.

Reschedules

Time or room changed? The calendar updates and a reminder goes out so the new slot sticks.

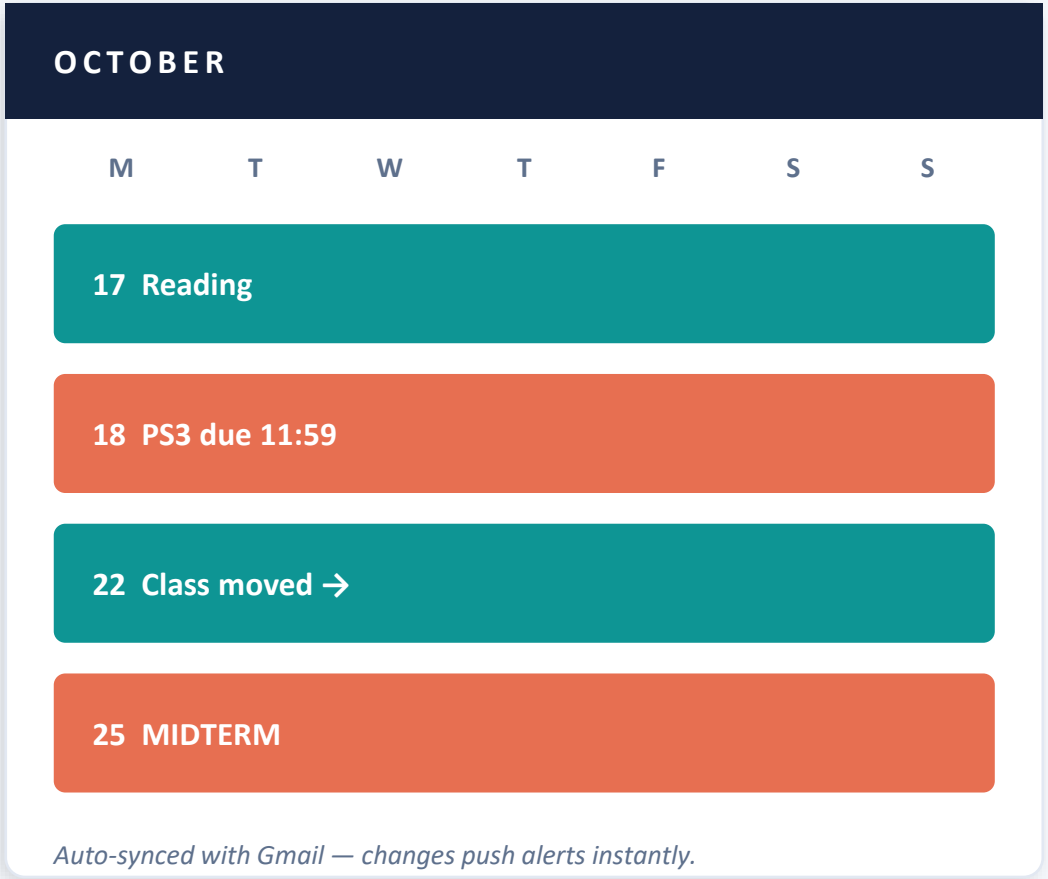

Exam reminders

Timely nudges before classes and exams, pulled from your captured dates — not guessed.

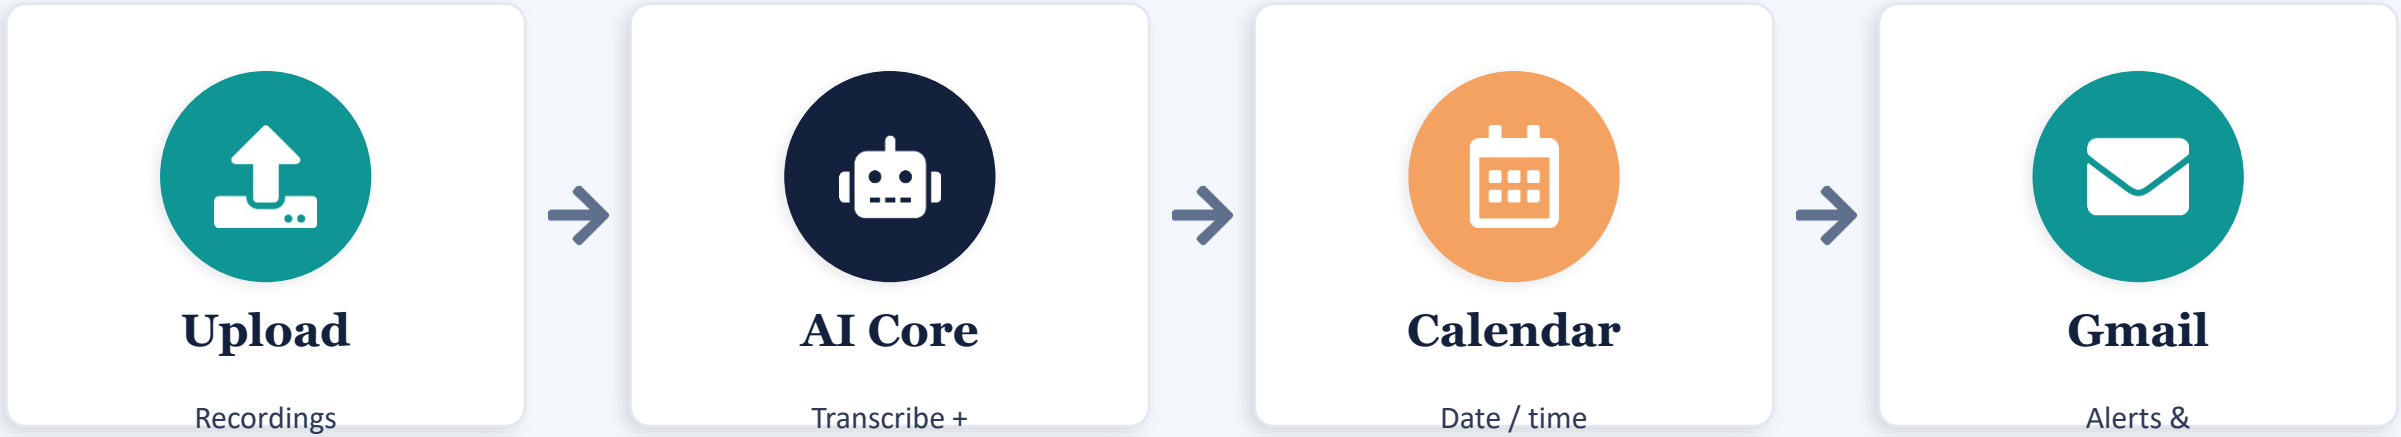

One calendar, the right precision

Every captured date lands in your in-app calendar: full date + time when discussed, date-only when time is left open.

- Classes, exams & deadlines in a single view
- Time-stamped events when the time is known
- All-day events when only the date is given
- Two-way with Gmail alerts for changes

A clean, modular pipeline

Stack: speech-to-text · LLM summarization · date-entity extraction · Gmail & Calendar APIs · web app

Yes — an AI agent can run ReCap on WorkBuddy

WorkBuddy is an agent platform: it gives an AI agent skills, browser automation, app connectors, scheduling and tool-calling. That is exactly the toolkit ReCap needs to operate end-to-end.

LLM reasoning

Summarize, extract dates & build the weekly plan.

Skills

Extend with search and tools.

Scheduling

Hooks & timers fire reminders and re-plan on changes.

Solving real-life problems, measurably

0
deadlines missed after capture

-65%
time spent rewatching

24/7
real-time cancellation alerts

1
weekly plan, auto-balanced

Who benefits: students balancing lectures, part-time work and deadlines; study groups; and anyone who learns better from structure than from chaos.

WHAT'S NEXT

From hackathon to daily habit

Now

Core pipeline: upload → summarize → dates → plan.

Next

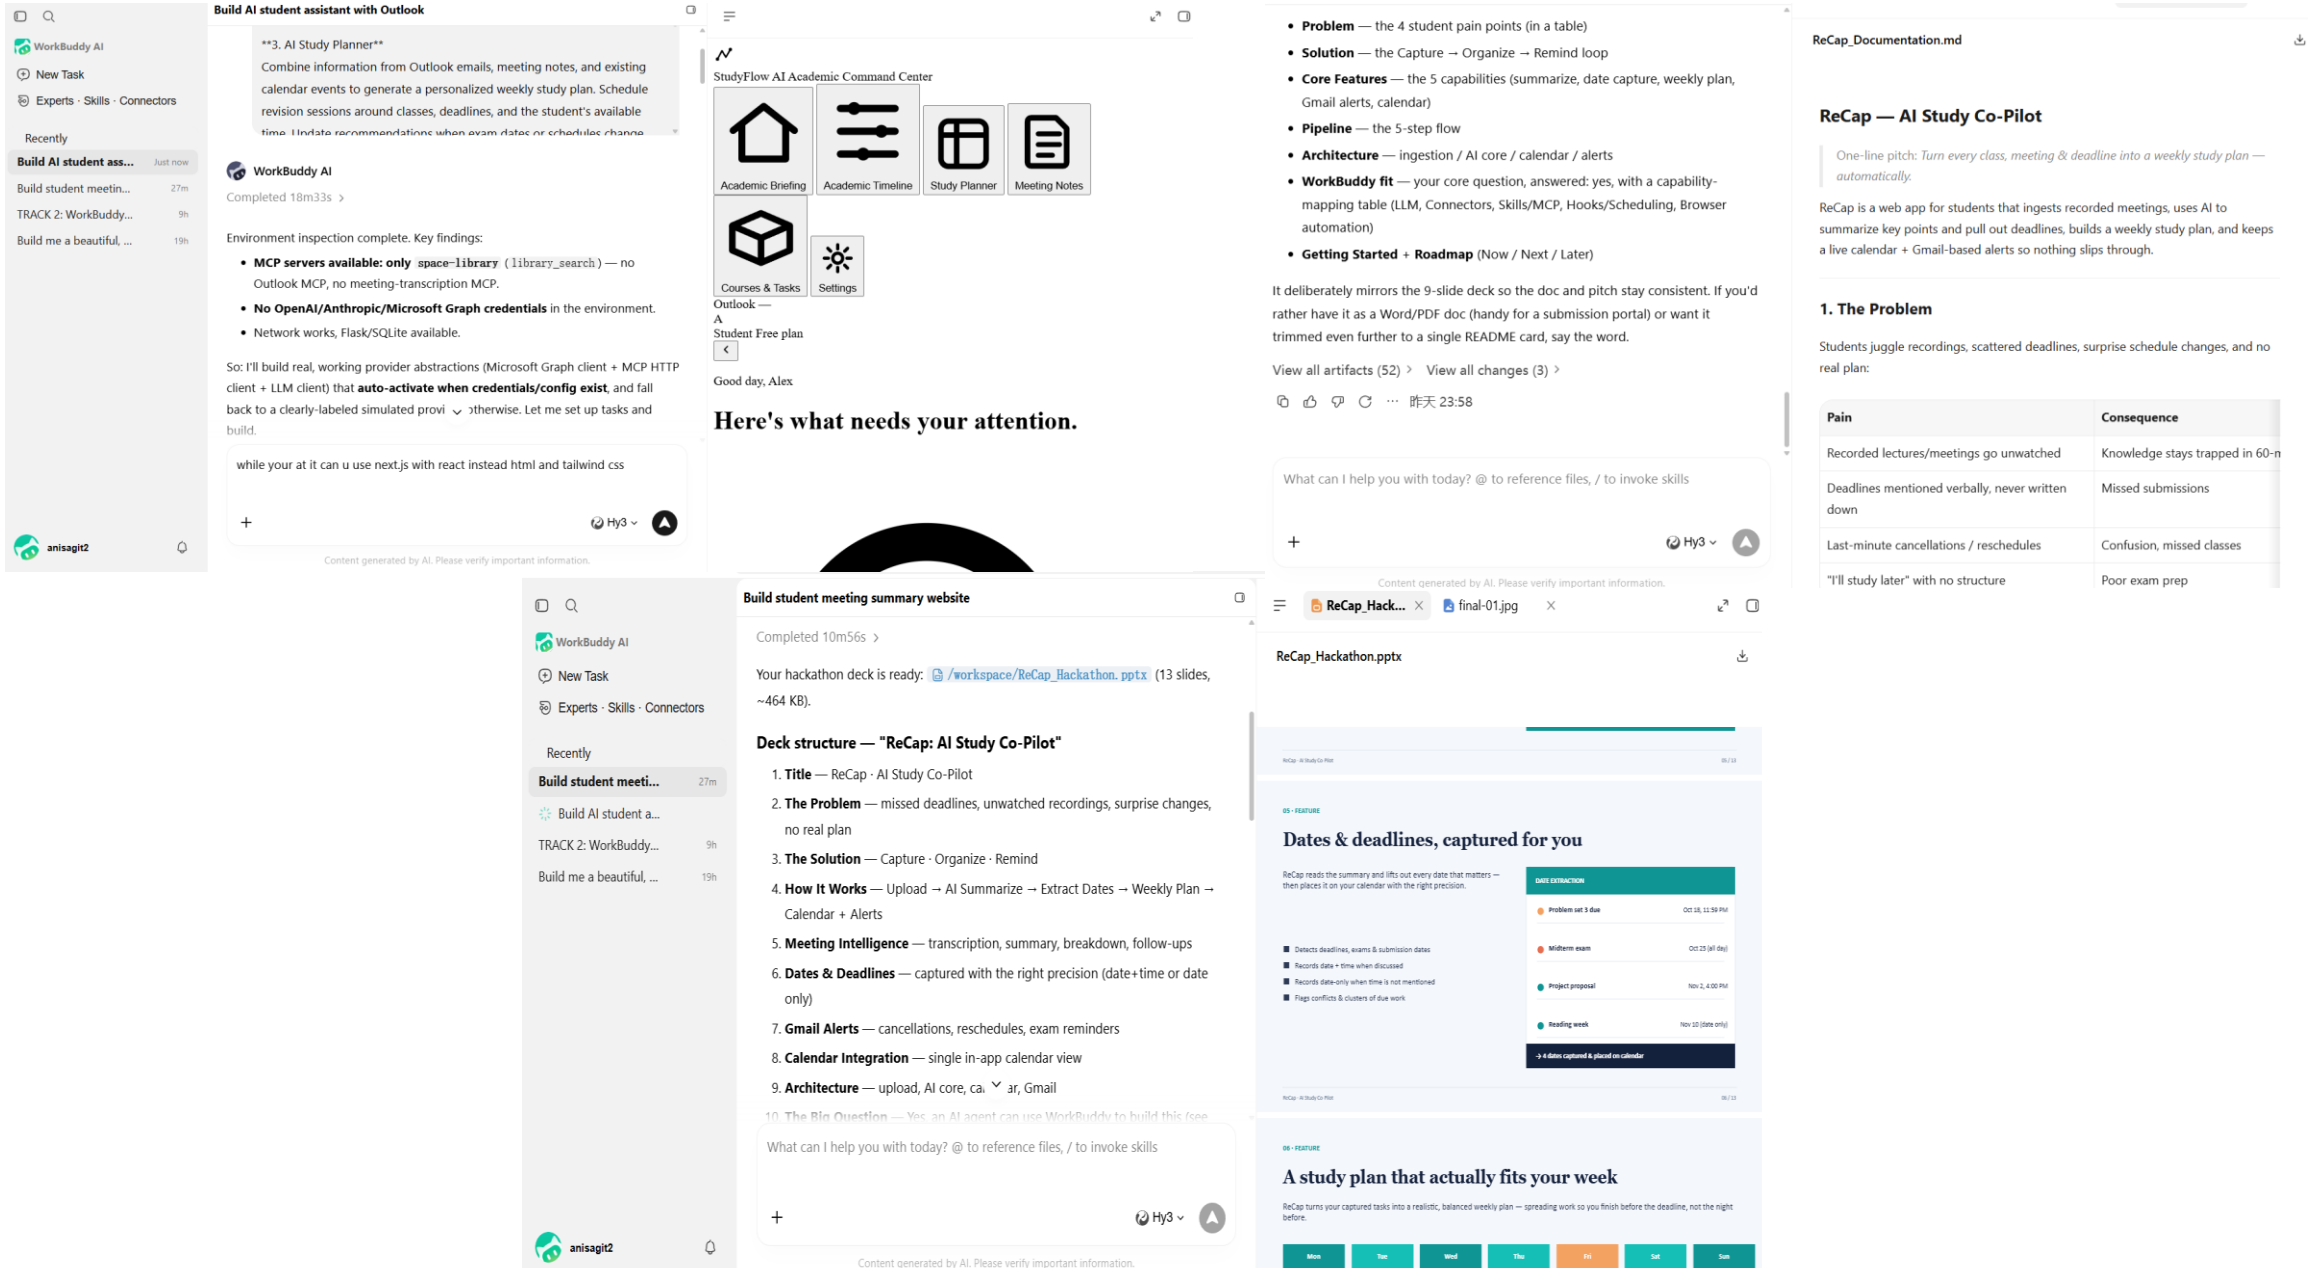

Gmail & Calendar live sync; mobile reminders.

Later

Multi-student study groups & cross-course planning.

ReCap — because the smartest students still need a system.

3. AI Study Planner
Combine information from Outlook emails, meeting notes, and existing calendar events to generate a personalized weekly study plan. Schedule revision sessions around classes, deadlines, and the student's available
WorkBuddy AI
Completed 18m33s
Environment inspection complete. Key findings:
MCP servers available: only space-library (library_search) — no Outlook MCP, no meeting-transcription MCP.
No OpenAI/Anthropic/Microsoft Graph credentials in the environment.
Network works, Flask/SQLite available.
So: I'll build real, working provider abstractions (Microsoft Graph client + MCP HTTP client + LLM client) that auto-activate when credentials/config exist, and fall back to a clearly-labeled simulated provi otherwise. Let me set up tasks and build.
while your at it can u use next.js with react instead html and tailwind css

Good day, Alex
Here's what needs your attention.
Problem — the 4 student pain points (in a table)
Solution — the Capture → Organize → Remind loop
Core Features — the 5 capabilities (summarize, date capture, weekly plan, Gmail alerts, calendar)
Pipeline — the 5-step flow
Architecture — ingestion / AI core / calendar / alerts
WorkBuddy fit — your core question, answered: yes, with a capability-mapping table (LLM, Connectors, Skills/MCP, Hooks/Scheduling, Browser automation)
Getting Started + Roadmap (Now / Next / Later)
It deliberately mirrors the 9-slide deck so the doc and pitch stay consistent. If you'd rather have it as a Word/PDF doc (handy for a submission portal) or want it trimmed even further to a single README card, say the word.

ReCap — AI Study Co-Pilot
One-line pitch: Turn every class, meeting & deadline into a weekly study plan — automatically.
ReCap is a web app for students that ingests recorded meetings, uses AI to summarize key points and pull out deadlines, builds a weekly study plan, and keeps a live calendar + Gmail-based alerts so nothing slips through.
1. The Problem
Students juggle recordings, scattered deadlines, surprise schedule changes, and no real plan:
Pain
Consequence
Recorded lectures/meetings go unwatched
Knowledge stays trapped in 60-n
Deadlines mentioned verbally, never written down
Missed submissions
Last-minute cancellations / reschedules
Confusion, missed classes
"I'll study later" with no structure
Poor exam prep

Deck structure — "ReCap: AI Study Co-Pilot"
Title — ReCap · AI Study Co-Pilot
The Problem — missed deadlines, unwatched recordings, surprise changes, no real plan
The Solution — Capture · Organize · Remind
How It Works — Upload → AI Summarize → Extract Dates → Weekly Plan → Calendar + Alerts
Meeting Intelligence — transcription, summary, breakdown, follow-ups
Dates & Deadlines — captured with the right precision (date+time or date only)
Gmail Alerts — cancellations, reschedules, exam reminders
Calendar Integration — single in-app calendar view
Architecture — upload, AI core, ca ar, Gmail
